The global Rotary Servo Motors market size is predicted to grow from US\$ 30820 million in 2025 to US\$ 47610 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

The rotary servo motor provides a completely coordinated motion control for electromechanical, hydraulic and pneumatic motion systems. These have a comparatively low inertia and their working needs only a single cable for providing feedback i.e. motor brake and motor power. The rotary servo motors serve the purpose of high-performance motion systems. Low inertia and medium inertia are types of rotary servo motors.

Servo motors are critical components in many industries that require precise control of their operation because together they enhance the precision and reliability of motion control systems. The production and distribution of motion control system components is done by the Servo Motors and Drives division. These parts are used in many applications, including robotics, aerospace, industrial automation, and medical equipment, expanding the market demand for servo motors.
