Rotary type cold water meter is a common type of water meter, mainly used for measuring water flow in households, commercial and industrial places. It rotates under the action of water flow through a rotor (also known as a rotor) to measure water flow rate. The core component of a rotary type cold water meter is a rotor equipped with a rotor. When water flows through the meter, the power of the water flow causes the rotor to rotate. The rotation of the rotor is transmitted to a counter through a mechanical transmission system, which records the number of rotations and calculates the water flow rate. The faster the water flow, the faster the rotor rotates, reflecting a larger flow rate.
