According to this study, the global Rotary Wing Aircraft Rivets market size will reach US\$ 1488 million by 2031.

A rivet is a metal pin having a “formed head” at one end and a “shop head” on other. Two types of rivets are used in aircrafts: solid shank rivets and special (blind) rivets. Aerospace rivets are used for joining aircraft skin sections, spar sections, and for securing fittings to various parts of aircraft. Additionally, aircraft rivets are also used fastening innumerable bracing members and several other parts together. The rivets form a bond which is as strong as the material joined. Aerospace rivets are manufactured with higher standards and specifications as compared with general use rivets. Few standard aerospace rivet types are 100 degree countersunk, 78 degree countersunk, brazier head, and flat head. This report focus on Rotary Wing Aircraft Rivets market.

According to the IATA, the total volume of air passenger traffic in 2022 increased by 64.4% compared to 2021. Global passenger traffic for the whole year was 68.5% of pre-pandemic (2019) levels. Total global aviation revenue grew by 43.6% to \$727 billion in 2022. In 2022, global airlines were expected to have a net loss of \$6.9 billion, significantly better than the net loss of \$42 billion in 2021 and \$137.7 billion in 2020. According to data from the Civil Aviation Administration of China, in 2022, the cumulative operating income of the entire industry was 632.89 billion yuan, down 15.8% from the previous year. The loss was 217.44 billion yuan. Among them, airlines achieved operating income of 336.48 billion yuan, and the loss was 177.12 billion yuan. The airport achieved operating income of 77.01 billion yuan and the loss was 47.62 billion yuan.
