The rotating self-locking safety hook is a hook with an automatic locking function, which is widely used in lifting and connection operations. Its characteristic is that a self-locking mechanism is designed at the hook mouth. When the load is applied, the hook mouth automatically closes and locks the object to prevent the object from accidentally falling off during the lifting process. The hook body can be rotated, which is convenient for use at different angles, providing higher operational flexibility and safety. The rotating self-locking safety hook is usually made of high-strength alloy steel and has a strong load-bearing capacity. It is suitable for heavy lifting operations in industries such as construction, logistics, and cranes.
