Rotational molding tank is a large plastic container manufactured through rotational molding process, which is widely used to store various liquids, chemicals, food, oil and other substances. The roto-molding process is to put plastic particles into a mold, and then heat and rotate the mold to make the plastic evenly cover the mold wall, and then cool and solidify to form a seamless container. Due to its seamless integrated structure, roto-molded tanks have stronger durability and sealing than traditional injection molding or welding processes, and can withstand pressure and temperature changes in extreme environments.
