Rotationally Molded Spas are a type of spa or hot tub manufactured using a rotational molding process. This process involves heating and rotating a mold filled with a powdered polymer material, typically high-density polyethylene (HDPE) or similar plastic resin. As the mold rotates on two axes, the powdered material melts and adheres to the interior surface of the mold, gradually forming the shape of the spa. Once cooled and solidified, the mold is removed, leaving behind a single-piece, seamless structure.

While rotomolded spas may not offer the same level of customization or features as other types of spas, they provide a durable, cost-effective option for homeowners seeking a relaxing hydrotherapy experience. They are available in various sizes, shapes, and configurations to accommodate different needs and preferences.
