A rotary evaporator is a specially designed instrument for the evaporation of solvent (single-stage or straight distillation) under vacuum. The evaporator consists of a heating bath with a rotating flask, in which the liquid is distributed as a thin film over the hot wall surfaces and can evaporate easily. The evaporation rate is regulated by the heating bath temperature, the size of flask, the pressure of distillation and the speed of rotation.

Shanghai Yarong, IKA, Yamato Scientific, Buchi and Tokyo Rikakikai are the main players of rotary evaporators, with the top 5 accounting for about 30% of the entire market.

Europe is the leading production region for rotary evaporators, accounting for 30% of the total market, followed by China with 27% of the market and it still keeps increasing.
