The global Rotor Sail market size is predicted to grow from US\$ 281 million in 2025 to US\$ 659 million in 2032; it is expected to grow at a CAGR of 13.2% from 2026 to 2032.

Global rotor sail production is expected to reach 1,000 units in 2024, with an average selling price of US\$200,000 per unit.

A rotor sail is a sail system consisting of one or more rotating cylinders (drums). These drums are mounted on the ship in a specific manner. When wind blows over the drums, their rotation accelerates, creating a pressure difference on both sides of the drum through the Magnus effect. This creates a force perpendicular to the direction of the fluid flow, which propels the ship forward. The working principle of a rotor sail is primarily based on the Magnus effect. The Magnus effect states that when a rotating object moves in a fluid, a pressure difference is created on both sides, generating a force perpendicular to the direction of the fluid flow. In a drum sail, when wind blows over the rotating drums, the rotation of the drums causes the wind to produce different flow rates and pressures on both sides of the drum, generating a forward thrust that propels the ship forward.

The global rotor sail market is expected to flourish in 2024, characterized by technological diversity. Finland's Norsepower, with its foldable system and intelligent control algorithms, holds over 45% of the market share, and its Yancheng factory has already implemented localized production. UK-based Anemoi, using a track-mounted system to overcome space limitations on bulk carriers, has completed 20 conversions in collaboration with Oldendorff and plans to install 50 annually by 2025. W?rtsil? focuses on modular solutions, targeting small and medium-sized vessels. Zhongfu Lianzhong, a Chinese carbon fiber rotor supplier, is deeply supporting China Merchants Sail Systems.

End-user demands are differentiated: shipowners/operators prioritize a 3-5 year return

on investment (ROI) and IMO carbon intensity compliance. Shipbuilders such as China State Shipbuilding Corporation are strengthening their integrated design capabilities, integrating rotor sails with dual-fuel engines. Leasing companies prefer modular products to enhance asset flexibility. This stratification of demand is driving the market towards technological specialization and customized solutions.
