The rotor-type remote water meter is a water meter that can achieve long-distance meter reading. It adopts a rotor-type metering structure and has the characteristics of high measurement accuracy, small initial flow rate, convenient meter reading, beautiful appearance, safety and hygiene, and long life. The rotation direction of the impeller of the rotor-type remote water meter is perpendicular to the direction of the water flow. It is suitable for measuring the total amount of one-way water flow in small-diameter pipes. Rotor-type remote water meters can be classified according to counters, media used, working principles, installation methods, etc. When installing a rotor-type remote water meter, attention should be paid to leaving a certain amount of free space around the water meter and its related pipe fittings to facilitate maintenance and module replacement. The caliber of the water meter should be selected based on the flow rate at the installation site. It is not suitable to use corrosion-resistant water meters. sexual liquid.
