The global Round Bowl Vibratory Deburring Machine market size is predicted to grow from US$ 740 million in 2025 to US$ 1127 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

In 2024, global sales of round bowl vibratory deburring machine reached 108,000 units, with an average price of $6,600. A round bowl vibratory deburring machine is a type of batch processing equipment that utilizes a ring-shaped working chamber and an eccentric vibrator to induce multi-directional relative motion between the workpiece, abrasive, and polishing medium under high-frequency vibration, thereby achieving deburring, chamfering, surface finishing, and cleaning. Due to its high processing efficiency, convenient workpiece loading and unloading, and achievable automation, this machine is widely used in the surface treatment of hardware, precision parts, automotive components, medical devices, and aerospace components. Compared to traditional drum polishing, vibratory bowl finishing systems offer better control over processing uniformity and surface quality, and are suitable for surface finishing of large quantities of small and medium-sized parts. Therefore, they play a key role in deburring and surface hardening processes in modern manufacturing.
