Round strand steel wire rope is a steel wire bundle made of multiple multi-strand steel wire ropes twisted around a fiber core or steel wire rope core. It is also called a three-twist steel wire rope. In this kind of steel wire rope, each strand of steel wire is round and wound and braided through a specific process. The steel cable structure of round strand steel wire rope is usually a secondary spiral shape of the central steel wire, and the remaining layers of steel wires are triple spiral shape. With the same diameter, round strand steel wire ropes have better flexibility and greater breaking force than ordinary steel wire ropes.

In addition, the manufacturing process of round strand steel wire rope is not much different from that of ordinary steel wire rope, but it requires the use of more steel wires and is twisted three times. This kind of steel wire rope is widely used in ports, mining, construction and other industries because it not only has high strength and wear resistance, but also has good bendability and corrosion resistance.

Compared with the special-shaped strand steel wire rope, the strand shape of the round strand steel wire rope is circular, while the strand shape of the special-shaped strand steel wire rope can be triangular, oval, etc. Special-shaped strand wire ropes usually have higher torsional strength and fatigue properties, but the manufacturing process is relatively complex.

In short, round strand steel wire rope is a steel wire bundle made of multiple multi-strand steel wire ropes twisted around a fiber core or steel wire rope core. It has the characteristics of high strength, wear resistance, softness and corrosion resistance.

The global Round Strand Wire Rope market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
