ROV Electric Manipulator Arm is an electric manipulator arm mounted on a remotely operated underwater vehicle (ROV), specially designed to perform underwater precision manipulation tasks. Unlike traditional hydraulic manipulator arms, electric manipulator arms use electric drive systems to provide high-precision motion control. It is usually used to grab, carry, cut or repair subsea equipment, and is widely used in deep-sea exploration, oil and gas extraction, subsea construction and environmental monitoring. Due to the high efficiency and stability of the electric system, this type of manipulator arm is more suitable for performing complex operations in deep-sea environments and reduces dependence on hydraulic systems.
