Abstracts

The global Rubber Accelerator Zinc Dibenzyldithiocarbamate market size is predicted to grow from US$ 181 million in 2025 to US$ 291 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Rubber Accelerator Zinc Dibenzyldithiocarbamate (ZBEC) is a low-nitrosamine, eco-friendly ultra accelerator widely used in natural rubber, styrene-butadiene rubber (SBR), EPDM, and various latex systems. It is particularly suitable for high-safety applications such as medical gloves, infant care products, and food-contact rubber goods, offering low vulcanization activation temperature, excellent scorch resistance, and the critical advantage of not generating carcinogenic nitrosamines. ZBEC is increasingly favored as a safer alternative to traditional accelerators like ZDEC, ZDBC, and PZ. Key upstream raw materials include benzyl chloride, sodium dithiocarbamate, zinc oxide, and caustic soda — all supported by mature supply chains and competitive cost structures. In 2024, the global ZBEC production capacity is estimated at 35,000 tons, with actual sales reaching approximately 27,600 tons. The average market price is around USD 6,200 per ton, and gross profit margins typically range from 30% to 38%. Major downstream customers include large-scale latex product exporters in Southeast Asia and China, medical consumables brands in Europe and North America, and manufacturers of food-grade rubber components. With increasingly stringent nitrosamine regulations in Western markets, growing policy pressure on toxicological safety, and continuous improvements in product purity and formulation compatibility, ZBEC is gaining momentum. Meanwhile, consumer demand for non-toxic, low-residue, and sustainable additives is accelerating adoption, shaping a market characterized by policy enforcement, technological innovation, and shifting preferences toward green chemistry.
