Rubber antidegradants are functional additives used in rubber formulations to protect rubber products from degradation caused by environmental factors such as oxygen, ozone, heat, light, and metal ions during use or storage. These additives include antioxidants (such as amine and phenolic types) and antiozonants, which help significantly slow down the aging process, enhance crack resistance, thermal stability, weatherability, fatigue resistance, and preserve elasticity. Widely used in tires, seals, conveyor belts, cable jackets, and vibration-damping components, antidegradants play a vital role in extending the service life and reliability of rubber products. Depending on the rubber compound and application, antidegradants may be used alone or in combination to achieve synergistic protection.
