The global Rubber Hose Release Agents market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Rubber hose release agents are specialized chemicals used in the manufacturing of rubber hoses to prevent the rubber from sticking to molds or surfaces during the production process. These agents form a thin, non-stick barrier between the rubber material and the mold, ensuring easy demolding without damaging the hose or leaving residues. They play a crucial role in maintaining the quality of the final product by enabling clean release, reducing defects, and extending the life of molds. Commonly used in industries like automotive, construction, and industrial applications, these release agents can be water-based, solvent-based, or silicone-based, depending on specific production requirements.
