Rubber Level Crossing Panels are modular surface panels made from high-strength rubber, designed to provide a smooth, durable, and skid-resistant roadway surface across railway tracks at grade-level crossings. These panels are installed between and alongside the rails, forming a continuous surface that supports both vehicular and pedestrian traffic while maintaining safe rail operations. Engineered to withstand heavy loads, impact, and weather conditions, rubber crossing panels offer flexibility, ease of installation, noise reduction, and lower maintenance compared to traditional concrete or timber crossings. They are widely used in urban and rural railway networks to improve crossing safety and longevity.
