??Rubber Lined Diaphragm Valves?? are industrial valves designed for handling corrosive, abrasive, or slurry-based fluids. They feature a metal valve body internally lined with ??elastomeric rubber?? (such as EPDM, natural rubber, or neoprene), providing excellent resistance to chemicals, erosion, and particulate-laden media. The valve operates via a flexible rubber diaphragm that isolates the fluid from mechanical components, ensuring a tight seal and preventing leakage. These valves are commonly used in mining, wastewater treatment, chemical processing, and pulp & paper industries, where durability, cost-effectiveness, and resistance to wear are essential. The rubber lining also dampens vibration and reduces noise, making them suitable for high-impact or slurry applications.
