Abstracts

The global Rubber Parking Wedge market size is predicted to grow from US$ 79.37 million in 2025 to US$ 111 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Parking wedge, also known as wheel stopper, or triangle wood, is a device used to prevent unnecessary movement of the vehicle. When used, the parking wedge is placed between the ground and the tire to stop the tire from sliding. Parking wedges are used in a wide range of scenarios. In addition to preventing vehicles from sliding during vehicle repair and maintenance, they are also often used in parking lots, slopes, road construction and other places to ensure safe parking of vehicles. Especially when parking on a slope, parking wedges can effectively prevent the vehicle from sliding down due to gravity, thereby avoiding possible traffic accidents.

Rubber parking wedges refer to wedge-shaped rubber products that are placed in front and behind the vehicle wheels and wedged tightly using the vehicle's own weight to prevent the vehicle from accidentally slipping during parking or loading and unloading operations. They are generally molded from natural rubber or recycled rubber with carbon black, fillers and vulcanization systems added to the surface. They have anti-skid textures and certain slope angles, and some products are equipped with handles or drawstrings for easy transportation and storage. They are widely used in truck and trailer loading and unloading platforms, ramp parking spaces, vehicle maintenance stations, airports and port sites, etc., as an important anti-slip safety auxiliary device in addition to mechanical braking. In 2024, global Rubber Parking Wedge production reached approximately 6,395 k units, with an average global market price of around US$ 12 per unit. The annual production capacity of rubber parking wedges is 9,000 k units , with a gross profit margin of about 20%.

Upstream core raw materials:

Rubber: Commonly used in heavy trucks and industrial vehicles. Suppliers provide natural rubber, recycled rubber or synthetic rubber (such as nitrile rubber, neoprene, which requires wear resistance, oil resistance, and weather resistance).

Chemical auxiliary materials: including carbon black (reinforcing agent), vulcanizing agent, antioxidant, pigment, etc.

Downstream applications: light vehicles, heavy vehicles.

Direct materials account for approximately 40%-60% of the total cost; direct manufacturing costs account for approximately 20%-30% of the total cost; indirect costs and period expenses account for approximately 20%-35% of the total cost.

rubber parking wedge The market as a whole is a trend of "steady rising demand and continuous upgrading of structure": on the one hand, countries have become increasingly strict in safety regulations for logistics parks, loading and unloading platforms, ramp operations, airports and ports. More and more companies have written "must use wheel chocks" into loading and unloading operating procedures and third-party audit standards to maintain the demand for wheel chocks under heavy vehicle operating conditions. Rigidity, and forming a stable update and supplement market; on the other hand, the product itself is evolving from the traditional extensive large rubber to the direction of "high weather-resistant recycled rubber formula, deep-grained anti-skid structure, oil resistance and chemical resistance, high visibility yellow and black warnings and reflective strips". Heavy-load scenes are more likely to use rubber plus steel skeleton structures, and mid-to-high-end customers are beginning to pay attention to the identification of load-bearing levels. certification, service life and comfort, and are willing to pay a premium for brand and performance; the channel side presents a three-parallel pattern of engineering supporting, distribution, wholesale and e-commerce retail. The engineering side is still dominated by large logistics enterprises, fleets, and centralized procurement of safety equipment, while the e-commerce side continues to penetrate into small fleets and individual users, bringing incremental demand; from the perspective of competition structure, developed countries The zone pays more attention to safety certification and quality stability. Emerging manufacturing countries dominate supply by virtue of their advantages in raw materials and manufacturing costs. In the future, the overall scale of the industry is unlikely to have explosive growth, but it will slowly rise along the direction of high safety levels, environmentally friendly materials,

refined scene division and branded operations. Low-end undifferentiated products will be further eliminated by price competition and environmental protection and safety supervision.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Rubber Parking Wedge Industry Forecast” looks at past sales and reviews total world Rubber Parking Wedge sales in 2025, providing a comprehensive analysis by region and market sector of projected Rubber Parking Wedge sales for 2026 through 2032. With Rubber Parking Wedge sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Rubber Parking Wedge industry.

This Insight Report provides a comprehensive analysis of the global Rubber Parking Wedge landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Rubber Parking Wedge portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global Rubber Parking Wedge market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Rubber Parking Wedge and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Rubber Parking Wedge.

This report presents a comprehensive overview, market shares, and growth opportunities of Rubber Parking Wedge market by product type, application, key manufacturers and key regions and countries.

2 EXECUTIVE SUMMARY

2.1 World Market Overview
  2.1.1 Global Rubber Parking Wedge Annual Sales 2021-2032
  2.1.2 World Current & Future Analysis for Rubber Parking Wedge by Geographic Region, 2021, 2025 & 2032
  2.1.3 World Current & Future Analysis for Rubber Parking Wedge by Country/Region, 2021, 2025 & 2032
2.2 Rubber Parking Wedge Segment by Type
  2.2.1 Recycled Rubber Wheel Chocks
  2.2.2 Raw Rubber Wheel Chocks
  2.2.3 Rubber Parking Wedge Sales by Type
    2.2.3.1 Global Rubber Parking Wedge Sales Market Share by Type (2021-2026)
    2.2.3.2 Global Rubber Parking Wedge Revenue and Market Share by Type (2021-2026)
    2.2.3.3 Global Rubber Parking Wedge Sale Price by Type (2021-2026)
2.3 Rubber Parking Wedge Segment by Carrying Capacity
  2.3.1 Lightweight Parking Wedge
  2.3.2 Heavy Duty Parking Wedge
  2.3.3 Rubber Parking Wedge Sales by Carrying Capacity
    2.3.3.1 Global Rubber Parking Wedge Sales Market Share by Carrying Capacity (2021-2026)
