Mining rubber-sheathed flexible cables are widely used in coal mines and other mines. There are a lot of flammable and combustible substances in mines, such as gas, dust, etc., electrical safety requirements are extremely strict, and there may be moisture and corrosive substances in the mines. Cables move frequently and are often subjected to bending, twisting, tugging, and crushing impacts. Cables used in the open air must also be able to withstand the effects of sunlight, so the requirements for mining cables are particularly strict. The conductive core should have a high degree of flexibility, and thinner soft copper wires are often used to strand at small pitches. The insulation layer should have high electrical resistance and mechanical strength. The cable is required to be soft, wear-resistant, impact-resistant, capable of frequent bending, and must also have good flame-retardant properties. The cable sheath is much thicker than the sheath of general rubber-sheathed flexible cables to increase the cable's impact resistance and crush resistance.

The global Rubber-sheathed Flexible Cable for Mining market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
