The global Rubber Torsional Vibration Damper market size is predicted to grow from US\$ 1333 million in 2025 to US\$ 2115 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Torsional Vibration Damper is an important component in the automotive clutch, which is mainly composed of elastic components and damping components. The spring component is used to reduce the torsional stiffness of the head end of the transmission system, thereby reducing a certain natural frequency of the transmission system, changing the natural mode of the system, so that it can avoid the excitation caused by the main harmonic excitation of the engine torque; Damping elements are used to effectively dissipate vibration energy.
