The global Rubella Recombinant Antigen market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Rubella Recombinant Antigen is a protein produced by genetic engineering technology that mimics the natural antigen of the rubella virus. Rubella virus is the virus that causes rubella, a common infectious disease that is particularly dangerous in pregnant women because infection may lead to congenital rubella syndrome in the fetus. Recombinant antigens are used in in vitro diagnostic reagents to detect immune responses caused by rubella infection (such as the presence of antibodies), and are used in vaccine development and basic research.

United States market for Rubella Recombinant Antigen is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Rubella Recombinant Antigen is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Rubella Recombinant Antigen is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
