Water skiing (also waterskiing or water-skiing) is a surface water sport in which an individual is pulled behind a boat or a cable ski installation over a body of water, skimming the surface on two skis or one ski. The sport requires sufficient area on a stretch of water, one or two skis, a tow boat with tow rope, two or three people (depending on local boating laws), and a personal flotation device. In addition, the skier must have adequate upper and lower body strength, muscular endurance, and good balance.

The industry trend for runabouts in water-skiing is driven by advancements in technology, improved performance, and enhanced user experience. Manufacturers are consistently improving hull design to optimize wake shape and reduce drag, providing a smoother skiing experience. The trend includes the integration of features such as adjustable wake plates, trim systems, and wake-shaping devices, allowing skiers to modify the wake to their preference. There is also a focus on convenience, with features like easy-to-use speed control systems and ergonomic seating arrangements for comfort during long days on the water. Additionally, advancements in audio and connectivity systems provide onboard entertainment and increased connectivity options for water-skiers. The industry trend emphasizes the need to enhance performance, comfort, and overall enjoyment for water-skiers of all levels.
