The global Rutile Titanium Dioxide for Coatings market size is predicted to grow from US$ 11470 million in 2025 to US$ 14880 million in 2032; it is expected to grow at a CAGR of 3.9% from 2026 to 2032.

In 2024, global Rutile Titanium Dioxide for Coatings production reached approximately 4,475 kilotons?with an average global market price of around US$ 2,580 per ton. Rutile Titanium Dioxide for coatings is a high-performance white pigment derived from titanium dioxide in the rutile crystalline form, specifically engineered to provide superior optical and functional properties in a wide range of coating applications. Characterized by its high refractive index (~2.7), excellent opacity, and outstanding brightness, rutile TiO? is the most widely used pigment in architectural, industrial, automotive, and marine coatings. Compared with the anatase form, rutile TiO? offers enhanced weather resistance, UV durability, and superior hiding power, making it especially suitable for exterior and long-lasting protective coatings. To improve dispersibility and durability, the pigment is often surface-treated with inorganic oxides such as alumina, silica, or zirconia, and sometimes combined with organic treatments, ensuring better compatibility with different resin systems including acrylic, alkyd, epoxy, polyurethane, and waterborne formulations. Its strong tinting strength and ability to reduce pigment volume concentration (PVC) while maintaining opacity enable formulators to achieve high coverage and cost-effective coating systems.

United States market for Rutile Titanium Dioxide for Coatings is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
