It is primarily indicated for the treatment of intermediate- or high-risk myelofibrosis and polycythemia vera resistant or intolerant to hydroxyurea, and has also been approved in some regions for graft-versus-host disease and other conditions. In 2024, the global sales volume of Ruxolitinib Tablets reached 3.72 million bottles, with an average price of 1,265 USD per bottle.The upstream of the Ruxolitinib Tablets industry primarily involves the synthesis of active pharmaceutical ingredients (APIs), with key raw materials including pyrimidine derivatives, amine intermediates, and various organic solvents, usually supplied by fine chemical manufacturers. The midstream segment covers the production and formulation processes, such as synthesis, purification, tableting, and packaging, which are carried out by pharmaceutical companies.
