The global RV Reducer for Robot market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

There are many types of reducers, but the market is more concerned about RV reducers and harmonic reducers. RV reducers have a more complex structure, but have a greater load-bearing capacity. Harmonic reducers have a smaller volume and higher cost compared to other types, but their application fields are more refined. Industrial robots with loads below 10kg mainly use harmonic reducers; industrial robots with high loads of 10-20kg can use harmonic reducers for their forearms and wrist joints; For those with a load of over 30kg, harmonic reducers can also be used on their lightly loaded end joints; However, heavy load areas such as the base, boom, and shoulders often use RV reducers.

According to data, the sales volume of industrial robots in China in 2022 was 303000 units. Based on the use of three harmonic reducers per industrial robot, each harmonic reducer costs 3000 yuan. It can be estimated that the market size of harmonic reducers in China in 2022 is 2.73 billion yuan.
