SaaS security posture management (SSPM) solutions are a new generation of automated security tools that monitor security risks in software-as-a-service (SaaS) applications. These platforms can significantly reduce the chances of sensitive data leakage and prevent unauthorized access to an organization’s SaaS applications. SSPM tools identify misconfigurations, compliance risks, and excessive user permissions. Some of these tools also detect inactive and redundant user accounts.SaaS applications offer improved convenience, productivity, and scalability. However, since these applications are hosted remotely, beyond an organization’s control, the risks of unauthorized access to sensitive user data or data leakage are quite high. SSPM tools are crucial to avoid such unfavorable outcomes and amplify the SaaS security efforts of an organization.Unlike cloud security posture management (CSPM) software which offers automated detection and remediation of cloud misconfigurations, SSPM solutions focus solely on SaaS applications. SSPM platforms are closely related to cloud access security broker (CASB) software. While CASB tools aim to secure the connection between employees and cloud service providers, SSPM solutions continuously monitor SaaS application environments to identify gaps between the actual security posture and the stated security policy. An SSPM tool supplements the enforcement capabilities of a CASB solution, and both can work together to address the security issues of SaaS applications.

The global SaaS Security Posture Management (SSPM) Software market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
