Sacral nerve stimulation devices Sacral nerve stimulation (SNS) has been used to treat OAB for several decades. The SNS device is implanted above the buttocks. A lead sends electrical impulses to the sacral nerves to calm the bladder.

A significant driver in the Sacral Nerve Stimulation (SNS) Devices market is the growing demand for minimally invasive and effective treatments for bladder and bowel control disorders, such as overactive bladder and fecal incontinence. SNS devices offer a promising solution to improve patients' quality of life by modulating sacral nerves and restoring control. However, a notable challenge in this market is the need for patient

awareness and accessibility. Ensuring that patients and healthcare providers are informed about the benefits of SNS therapy and have access to these devices can be challenging. Manufacturers and healthcare professionals must work together to raise awareness, provide proper training, and expand the availability of SNS devices to reach a broader patient population and address the unmet needs in the treatment of pelvic floor disorders.
