According to our (LP Info Research) latest study, the global Sacrificial Mold Release Agent (SMRA) market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Sacrificial Mold Release Agent (SMRA) is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Sacrificial Mold Release Agent (SMRA) market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Sacrificial Mold Release Agent (SMRA) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Sacrificial Mold Release Agent (SMRA). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Sacrificial Mold Release Agent (SMRA) market.

Sacrificial mold release agents are applied in every molding cycle. The release agent film on the mold surface is in great part depleted after each molding cycle and needs to be replenished. Sacrificial mold release agents are generally non-functional, non-reactive coatings that create a physical barrier between the mold and material that is transferred to and removed with the molded part. Sacrificial release agents are designed for frequent application and generally offer limited releases per application.

At the onset of molding operations, sacrificial mold release agents were the only

available category. Hence the reason they are often referred to as conventional release agents.
