A Biological Safety Cabinet (BSC), also known as a Biosafety Cabinet is mainly used for handling pathogenic biological samples or for applications that require a sterile work zone. A biological safety cabinet creates inflow and downflow of air that provides operator protection. The downflow air passes through an ULPA/HEPA filter and creates an ISO Class 3 work zone to protect samples from the risk of cross-contamination. The air exhausted also passes through an ULPA/HEPA filter prior to release to protect the environment. Class I biosafety cabinets cannot provide effective protection for operating objects. In this report, we focus on Class II A, Class II B and Class III type BSC.

The global Safety Cabinets market size is projected to grow from US\$ 242 million in 2024 to US\$ 348 million in 2030; it is expected to grow at a CAGR of 6.2% from 2024 to 2030.
