Safety mat controllers are used to send and receive signals within a hazardous industrial area to make sure that neither workers nor machinery are injured or damaged. Safety mat controllers are connected to either a single safety mat, or a serious of them. These mats, in turn, are lain out in a matrix as a boundary around a machine or robot. When any pressure is applied to a mat, be it from foot traffic or vehicles, conductive plates in the mat touch and signal are sent to the controller via an out put relay.

The global Safety Mat Controller market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
