The global Safety Seats market size is predicted to grow from US\$ 6334 million in 2025 to US\$ 10100 million in 2031; it is expected to grow at a CAGR of 8.1% from 2025 to 2031.

Safety seats, sometimes referred to as an infant safety seat, are seats designed specifically to protect children from injury or death during collisions. Car manufacturers may integrate child safety seats directly into their vehicle's design. Most commonly, these seats are purchased and installed by consumers.

Safety seats fit newborns and smaller infants best. They are used only as rear-facing seats (this means the baby faces the back of the car). Infant-only seats are for babies from birth until they reach around 35 pounds (about 16 kilograms), depending on the model. You'll need to use another seat when the baby outgrows the seat. Safety seats are convenient because they also can be used as carriers, chairs, or rockers when not used in the car. Many models hook into a base, and the base can stay in the car. Some can be clicked into strollers.
