The global Salbutamol Oral Liquid market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Salbutamol Oral Liquid is an oral liquid containing salbutamol hydrochloride as an active ingredient, which is commonly used in the treatment of asthma, chronic obstructive pulmonary disease (COPD) and other respiratory diseases.

The salbutamol market has been growing steadily in recent years due to the rising incidence of respiratory diseases such as asthma, chronic obstructive pulmonary disease (COPD), and bronchitis. Salbutamol is a bronchodilator medication that helps to relax the muscles in the airways, making it easier to breathe. It is widely used as a rescue medication for the treatment of acute asthma attacks and as a maintenance medication for the prevention of asthma symptoms. The increasing prevalence of respiratory diseases, coupled with the growing awareness of the benefits of early diagnosis and treatment, is driving the demand for salbutamol inhalation products. In addition, the rise in air pollution levels and the growing prevalence of smoking are also contributing to the growth of the salbutamol inhalation market. The market is also witnessing a trend towards the development of more effective and convenient inhalation devices, such as metered-dose inhalers, dry powder inhalers, and nebulizers. These devices offer greater convenience, ease of use, and improved drug delivery, which is driving their adoption in the market.
