The global Salon Heated Foam Machine market size is predicted to grow from US\$ 128 million in 2025 to US\$ 210 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

In 2025, global production of salon heated foam machines reached approximately 60,000?120,000 units. A salon heated foam machine is a professional device used in beauty and hair care settings. It uses a heating and foaming system to transform skincare or cleansing solutions into warm, fine foam, which is then evenly dispensed for scalp or skin treatment. This equipment is typically used in hair salons, SPA centers, and scalp care clinics. It helps improve cleansing efficiency while enhancing the penetration of care products and overall user comfort. Compared with traditional manual application methods, a salon heated foam machine offers temperature control, consistent and fine foam output, and standardized operation, thereby improving treatment effectiveness and service professionalism.

The salon heated foam machine market is currently in a stage of upgrading within the beauty care equipment industry, characterized by increasing specialization and functional segmentation. Overall demand is primarily driven by the growing popularity of scalp care concepts and the continuous upgrading of premium salon services. As consumers place greater emphasis on scalp health and treatment experience, traditional manual care methods are gradually being replaced by standardized and intelligent equipment-based operations, thereby promoting the adoption of heated foaming care devices. At present, market demand is mainly concentrated in high-end hair salons, SPA treatment centers, and professional scalp care clinics. In addition, some chain beauty brands have begun introducing such equipment to improve service consistency and customer experience. In terms of competitive landscape, the industry is

still dominated by professional beauty equipment manufacturers and regional brands, with product differentiation mainly reflected in heating stability, foam fineness, and operational convenience. Looking ahead, with the continued professionalization of beauty services and the development of automated care equipment, salon heated foam machines are expected to evolve toward intelligent temperature control, customized care solutions, and multi-functional integration.
