Electrode salt bath furnace introduces low-voltage (5.5-36 volts) high-current alternating current into the furnace through metal electrodes, and the current flows through the salt solution to generate heat. The salt solution is not only a heating element, but also a medium for heating the workpiece. The temperature of the brine varies according to the composition of the brine, generally between 150 and 1300°C. The action of the magnetic field can make the salt liquid circulate and turn, which is beneficial to the

uniform temperature of the salt liquid and can increase the heating speed of the workpiece.
