A salt chlorine generator (also known as a salt system or a salt chlorinator) is a swimming pool chlorination system that creates chlorine from sodium chloride (salt).

As salt water travels through the swimming pool’s circulation system, it enters the salt chlorine generator and passes through a salt cell. As the salt water flows through the cell, a low-voltage direct current is applied to flat, rectangular plates inside the cell, initiating electrolysis. Through electrolysis, salt and water break up into hydrogen gas and hypochlorous acid. The hydrogen gas simply leaves the swimming pool water in the form of small bubbles. The hypochlorous acid sanitizes the swimming pool water and
