Salt fog testing services are a type of corrosion testing that simulate the effects of saltwater exposure on materials and coatings. This testing is commonly used to evaluate the performance and durability of products that will be exposed to marine environments or other corrosive conditions. During salt fog testing, the test samples are placed in a chamber where they are exposed to a controlled mist of saltwater for a specified period of time. The test samples are then evaluated for signs of corrosion, such as rust, pitting, or discoloration. Salt fog testing services can help manufacturers identify and address potential weaknesses in their products, ensuring their reliability and longevity in harsh environments.
