A Salt Spray Corrosion Chamber, also known as a Salt Fog Chamber or Salt Spray Test Chamber, is a specialized laboratory apparatus used to simulate and assess the corrosion resistance of materials and coatings, particularly metals and protective surface finishes. This chamber creates a controlled and accelerated environment where a saline solution (usually a sodium chloride solution) is sprayed or fogged onto test specimens to replicate the corrosive conditions that materials may encounter in real-world, marine, or harsh industrial environments.

The integration of advanced automation features, including computerized control systems, remote monitoring, and programmable test sequences, allowing for greater precision and efficiency in corrosion testing.
