The salvage ship is one of the main ship types in the rescue and rescue ship. It is the working mother ship of the salvage project and the command center of the entire salvage project. In general salvage ships, there are deck decompression cabins, rescue winches, etc., and some also have retractable submersible clocks or deep submersibles. The salvage boat cooperates with the barge, tugboat and buoy to carry out the salvage operation. The size of the salvage boat varies from a few hundred tons to a few thousand tons. The length is between tens of meters and more than 100 meters; the salvage depth is between 100 meters and five or six hundred meters, and even deeper. In addition to being equipped with underwater cutting and welding equipment for machine cutting, oxygen arc cutting, combustion cutting and explosive cutting, the salvage ship is also equipped with various underwater communication equipment. The salvage ship is also equipped with various equipment such as anchor positioning system, air compressor, oxygen cylinder, high-pressure water pump, submersible pump and so on. Relying on these equipments, salvage ships can complete deep sea salvage and rescue missions.
