Samarium Filters is by far the most expensive option. Samarium Filters blocks all UV light below 400nm, so it is an excellent UV filter. Like Cerium Doped Glass, Samarium Filters also fluoresces in the visible range, causing a slight increase in pumping efficiency with some lasing mediums. The property that sets Samarium Filters apart from Cerium Doped Glass, is that it also blocks the 1064nm wavelength. This is very important when pumping Nd:YAG lasers which operate at 1064nm, because the 1064nm wavelength coming from the lamp can interfere with the 1064nm wavelength created when pumping the Neodymium in the crystal.
