## Abstracts

The global Samarium-Iron Alloy market size is predicted to grow from US\$ 147 million in 2025 to US\$ 215 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

In 2025, the global production of samarium-iron alloy is estimated to be approximately 2,680 tons, with an average selling price of about US\$56 per kilogram. The scale of single-line production capacity varies depending on the production process and investment scale, with an average gross profit margin of approximately 15-25%. Samarium-iron alloy is an alloy of samarium and iron, belonging to the category of rare earth permanent magnet materials or magnet components. It is known for its wide operating temperature range and high magnetic properties, and is often used in applications requiring high operating temperatures, replacing some samarium-cobalt magnets. It is an important component in the field of advanced functional materials.

The upstream raw materials for samarium-iron alloy mainly include samarium elements from rare earth resources, as well as alloy metals such as iron, cobalt, and zirconium. Its downstream applications are primarily in the field of high-performance permanent magnet materials, particularly samarium-cobalt permanent magnets and samarium-iron-nitrogen bonded magnets. These are widely used in aerospace, national defense, high-end industrial, automotive, and medical equipment industries to meet demanding operating conditions such as high temperature, high stability, and lightweight requirements.
