## Abstracts

According to this study, the global Same Day Surgery Centers market size will reach US\$ 532180 million by 2031.

Same Day Surgery Centers is a specialized outpatient facility where patients undergo surgical procedures without having to be admitted to a hospital. Patients leave the same day they are treated - usually within a few hours. In general, patients walk into the operating room and upon recovery walk out escorted by a family member or loved one.

The outpatient surgical market is driven by the increasing demand for cost-effective and convenient medical procedures and the growing emphasis on ambulatory care. Outpatient surgical procedures refer to surgeries that do not require an overnight hospital stay, allowing patients to return home on the same day of the procedure. The rise in the aging population and the prevalence of chronic diseases contribute to market growth, as many of these conditions can be managed through outpatient surgeries. Moreover, advancements in medical technology and surgical techniques have made outpatient surgeries safer and more feasible for a wide range of procedures. However, the market also faces challenges, including the need for proper patient selection and preoperative assessment to ensure the safety and success of outpatient surgeries. Additionally, addressing reimbursement issues and ensuring high-quality care in outpatient settings can pose obstacles for healthcare providers and facilities. To succeed, stakeholders must focus on patient education and informed decision-making, collaborate with insurance providers to improve reimbursement processes, and address the challenges to meet the increasing demand for outpatient surgical services and optimize patient outcomes.
