The global Sand Battery market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Sand Battery is a large-scale, high-temperature thermal energy storage system that uses sand or similar materials as its storage medium. The sand is able to store heat at around 500-600 degrees Celsius for months, so solar energy generated in the summer can be used to heat homes in the winter. The system charges by using electricity from the grid or local renewable sources such as solar PV or wind farms, storing energy when clean and low-cost electricity is available. Energy is transferred to the Sand Battery through a closed-loop heat transfer system. When heat is needed, it's discharged via a heat exchanger.

United States market for Sand Battery is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Sand Battery is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Sand Battery is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
