SAP for adult diapers is a key functional material designed to provide high liquid absorption, retention, and leak protection for incontinence products used by elderly or mobility-impaired individuals. SAP can absorb many times its own weight in liquid, locking it in gel form to keep the surface dry and comfortable. In adult diapers, this ensures prolonged dryness, odor control, and skin protection, which are critical for user dignity and health. As aging populations increase globally, especially in developed and emerging economies, the demand for high-performance adult incontinence products incorporating SAP continues to grow.

The market for SAP for adult diapers is primarily driven by the rapid aging of the global population, increasing prevalence of incontinence issues, and rising awareness of personal hygiene and quality of life among the elderly. As life expectancy rises and more people live with age-related health conditions, the demand for high-performance, discreet, and comfortable adult incontinence products has grown significantly. SAP plays a critical role in ensuring these products offer superior absorbency, dryness, and odor control, making them essential in long-term care settings and home use.
