## Abstracts

The global SATA Port Multiplier market size is predicted to grow from US\$ 813 million in 2025 to US\$ 1326 million in 2031; it is expected to grow at a CAGR of 8.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A SATA port multiplier is a hardware device used to extend a single SATA host port (such as a SATA interface on a motherboard or RAID controller) to multiple SATA devices (such as hard disks, SSDs, or optical drives) to achieve parallel connection of multiple devices. It provides 1:N (usually 1?4 or 1?5) port expansion through the Port Multiplier technology in the SATA specification (such as the SATA 2.0/3.0 standard), supports command layer transmission (FIS-based switching), but the bandwidth is limited by the main port rate (such as SATA 3.0's 6Gbps needs to be shared). It is mainly used in scenarios such as NAS, servers, and storage arrays to improve storage scalability while reducing host port requirements.

United States market for SATA Port Multiplier is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for SATA Port Multiplier is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
