The global Satellite AIS (Automatic Identification System) market size is predicted to grow from US\$ 323 million in 2025 to US\$ 503 million in 2031; it is expected to grow at a CAGR of 7.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Satellite AIS (Automatic Identification System) is a vessel identification system that is used for collision avoidance, identification and location information. Satellite AIS is also used for maritime domain awareness, search and rescue, environmental monitoring and maritime intelligence applications.

Based on application, the satellite AIS market is segmented into fleet management, ship tracking, maritime security, search and rescue, and other applications. The main purpose of the system is ship tracking. The app helps border control agencies better handle maritime traffic. Growth in global maritime traffic owing to increasing trade activities is one of the major factors in this segment over the forecast period. Maritime security and surveillance are the two main drivers for the adoption of AIS technology. Maritime transportation is considered a major threat vector and one of the drivers behind the Coast Guard and Navy's push for improved visibility and efficient security assistance.
