The global Satellite Electric Thruster market size is predicted to grow from US\$ 483 million in 2025 to US\$ 731 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

The satellite propulsion system is also the power device of the satellite. It is used to provide the force and torque required for satellite orbit change and maintenance, and satellite pointing change and maintenance. Its essence is to use the working fluid it carries and rely on the reaction principle to enable the satellite to obtain external forces to change its state. The electrothermal propulsion system uses electric energy to heat the propellant, and the heated propellant is accelerated and ejected through the Laval nozzle to generate thrust. Its advantages are simple structure, cheap price, safety and reliability, convenient operation and maintenance, etc.
