Abstracts

The global Satellite Reaction Wheel market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Reaction wheels are used to control the attitude of a satellite without the use of thrusters, which reduces the mass fraction needed for fuel.

Reaction wheels are an integral part of any type of satellite and spacecraft, and they ensure three-axis attitude control without the need for external torque sources such as rockets or propellants. They are becoming increasingly important in today's aerospace industry as they offer safer, more flexible and lightweight options for precise control of space systems.
