The global Saturated Double End-Capped Polyether market size is predicted to grow from US$ 279 million in 2025 to US$ 405 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

In 2025, global sales volume of Saturated Double End-Capped Polyether was approximately 62 thousand tons. The mainstream ex-factory average selling price was about US$4,600 per ton, and the gross margin of major manufacturers was approximately 24%–36%.

Saturated Double End-Capped Polyether is a type of functional polyether product mainly based on polyoxyethylene, polyoxypropylene, or EO/PO copolymer chain segments. Both molecular chain ends are capped with saturated alkyl groups such as methyl, ethyl, or butyl groups. Typical products include polyethylene glycol dimethyl ether, diethylene glycol dimethyl ether, triethylene glycol dimethyl ether, tetraethylene glycol dimethyl ether, diethylene glycol diethyl ether, diethylene glycol dibutyl ether, and certain polyether dialkyl ether products. Its key characteristics are that both chain ends no longer retain ordinary hydroxyl groups, and the terminal groups do not contain carbon-carbon double bonds such as allyl, methallyl, or vinyl groups, resulting in low hydroxyl value, low reactivity, and good chemical stability.

Saturated Double End-Capped Polyether is mainly used in gas purification solvents, electrolyte solvents, industrial cleaning agents, coating additives, and other fields. Among them, polyethylene glycol dimethyl ether products can be used in acid gas absorption and purification systems; low-molecular-weight ethylene glycol diether and diethylene glycol diether products can be used in electrolytes, fine chemical solvents, and industrial cleaning; higher-molecular-weight double end-capped polyethers are

more commonly used to provide lubrication, low-foaming performance, leveling performance, and formulation compatibility adjustment.
