Saturated ketones are a class of organic compounds and are a type of ketone. In terms of chemical structure, there are two carbon atoms connected to the carbonyl carbon in the saturated ketone molecule. The carbon atoms on both sides are connected to carbon atoms and hydrogen atoms, and there are no other functional groups. Therefore, the general structural formula of a saturated ketone is: $R_1-C(=O)-R_2$, where R_1 and R_2 represent different organic groups. Saturated ketone is a relatively stable compound, usually liquid or solid at room temperature, with certain solubility and volatility. They have a wide range of applications in chemical and industrial fields, such as organic synthesis intermediates, solvents, spices and pharmaceuticals.

The global Saturated Ketone market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
