A sausage cutter is a machine designed for cutting sausages. It is mainly used in meat processing plants, supermarkets and restaurants. The sausage is held in place by a sausage rack, and the cutter is activated by a blade or roller to perform the cutting. The working principle is divided into blade type and roller type, where the blade type provides a clean cutting surface, and the roller type is cost-effective and provides safe use. These tools provide efficient and uniform cutting compared to manual methods, and roller type tools in particular have safety advantages over blade type tools.

The global Sausage Cutter market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
